Roshan Yadav

Mumbai, India | +91 9834905805 | roshany.ir.ry@gmail.com | linkedin.com/in/roshanyadav026 | github.com/crazycodeop

Summary

Python-focused Full Stack Software Engineer with **2+ years** of experience building and scaling multi-tenant **B2B SaaS** applications using **Python, Django, FastAPI, and React**. Experienced in end-to-end **REST API** development, **PostgreSQL** and ORM optimization, asynchronous task processing with **Celery and Redis**, and cloud deployments on **AWS** using **Docker and CI/CD**. Strong background in frontend-to-backend integration, application security, and production **GenAI / RAG** workflows.

Skills

Languages & Core: Python, JavaScript, SQL (PostgreSQL, MySQL), HTML5/CSS3
Backend & Architecture: Django, Django REST Framework, FastAPI, Celery, RESTful Microservices, System Design
Cloud & DevOps: AWS (EC2, S3, RDS, IAM), Docker, Linux, Jenkins CI/CD, Nginx, Serverless DBs
AI & Machine Learning: Gemini API, LangChain, LangGraph, RAG, Vector Databases, Prompt Orchestration
Frontend & Integration: React, Third-Party API Integration (Payment Gateways, eSignature), OAuth2, JWT
Practices & Performance: High-Availability Scaling, Redis Caching, ORM Tuning, Automated & Performance Testing

Experience

VakilDesk Technologies Pvt. Ltd. Remote
Software Engineer Oct 2024 – Oct 2026

- Architected and delivered **4 full-stack B2B SaaS platforms** using **Python, Django, Django REST Framework, and React**, connecting responsive frontend interfaces to REST APIs across **10+ enterprise clients** with **100% on-time delivery**.
- Optimized **PostgreSQL** performance by refactoring complex **Django ORM** queries, eliminating N+1 bottlenecks, and adding **Redis** caching layers, reducing REST API latency and frontend load times by **40%**.
- Integrated third-party services (**DocuSign, eMudhra, GST, and WhiteBooks APIs**) using **Celery and Redis** background workers with real-time **React** status updates, processing **10,000+ monthly asynchronous transactions** with zero data loss.
- Deployed and maintained full-stack applications on **AWS (EC2, S3, RDS)** using **Docker, Nginx, and Jenkins CI/CD** pipelines, reducing release deployment cycles by **35%** while sustaining **99.9% SLA uptime**.
- Reduced production cloud hosting expenses by **50%** by diagnosing memory leaks and rightsizing **AWS EC2** instances from 32 GiB to 8 GiB RAM without performance degradation.
- Developed real-time document collaboration workflows using **React, Django, and WebDAV** for live MS Word editing, automated version history, and PDF generation across **5,000+ legal documents**.
- Implemented multi-tenant application security across **10+ client environments** using **JWT, Google OAuth2, RBAC, CORS, and rate limiting** to protect sensitive enterprise payloads.
- Established automated backend and API test suites using **pytest**, achieving **85%+ test coverage** and reducing post-deployment production regressions by **45%**.
- Engineered production **GenAI RAG pipelines** using **Gemini API**, **LangChain**, and vector embeddings for semantic retrieval, cutting automated legal drafting turnaround time by **60%**.

Projects

Docvyn – Document Intelligence Platform | *FastAPI, React 18, PostgreSQL, pgvector, Celery, Redis* | GitHub

- Developed a multi-tenant document intelligence platform using **FastAPI, SQLAlchemy 2.0, and PostgreSQL with pgvector**, supporting document ingestion, vector search, and source-grounded question answering.
- Implemented asynchronous document processing using **Celery and Redis**, integrating **Groq and Gemini APIs** with **RAG pipelines**, prompt-injection protection, and page-level source citations.
- Built the **React 18** frontend and implemented **JWT-based authentication**, tenant-level data isolation, and automated backend and frontend testing.

FlowForge AI – Visual AI Workflow Orchestrator | *FastAPI, React Flow, PostgreSQL, Celery, Redis* | GitHub

- Built a visual workflow orchestration platform using **FastAPI, React Flow, and PostgreSQL**, enabling users to design and execute multi-step AI workflows.
- Implemented DAG-based task scheduling using **Kahn's algorithm**, distributed **Celery** workers, task retries, worker heartbeats, and recovery mechanisms for failed executions.
- Integrated LLM providers with structured output validation, **Pydantic** schema repair, and human approval workflows, supported by automated **Pytest** coverage.

Education

Thadomal Shahani Engineering College Mumbai, India
B.E., Electronics & Telecommunications Engineering (CGPA: 8.82 / 10.00) June 2024

- Relevant Coursework: Data Structures, Analysis of Algorithms, Object-Oriented Programming, Database Management Systems (DBMS)
